POWER STEERING SYSTEM

PRECAUTION

1. HANDLING PRECAUTIONS ON SRS AIRBAG SYSTEM

(a) The vehicle is equipped with SRS (Supplemental Restraint System) such as the driver airbag and front passenger airbag. Failure to carry out service operation in correct sequence could cause the SRS to unexpectedly deploy during servicing, possibly leading to a serious accident. Before servicing (including removal or installation of parts, inspection or replacement), be sure to read the precautionary notice for the supplemental restraint system (See page 60–1).

   (a) Visually check the belt for excessive wear, frayed cords, etc.
   If any defect is found, replace the drive belt.
   **HINT:**
   Cracks on the rib side of a belt are considered acceptable. If the missing chunks from the ribs are found on the belt, it should be replaced.

2. **BLEED POWER STEERING SYSTEM**
   (a) Check the fluid level.
   (b) Jack up the front of the vehicle and support it with the stands.
   (c) Turn the steering wheel.
       (1) With the engine stopped, turn the wheel slowly from lock to lock several times.
   (d) Lower the vehicle.
   (e) Start the engine.
       (1) Run the engine at idle for a few minutes.
   (f) Turn the steering wheel.
       (1) With the engine idling, turn the wheel to left or right full lock position and keep it there for 2 – 3 seconds, then turn the wheel to the opposite full lock position and keep it there for 2 – 3 seconds.
       (2) Repeat (1) several times.
   (g) Stop the engine.
   (h) Check for foaming or emulsification.
